

Paraguayan Guarani progressive nasalization as phonologically conditioned allomorphy

handout

Marisabel (Isa) Cabrera¹ • UCLA
isacabrera@ucla.edu

slides

1 Introduction

- Most Tupi-Guarani languages show extensive nasalization processes.
- Some show both **regressive** and “**progressive**” nasal spread simultaneously (Lapierre & Michael 2018).
- An example from Paraguayan Guarani:

- (1) a. n^de-jagua-^[k]uera b. [←]nẽ-mĩtã-^[ŋ]uera
2SG-dog-PL 2SG-child-PL
'your dogs' 'your children'

- Although regressive nasalization in Guarani is exceptionless, **progressive** nasalization is morpheme-specific.

- (1) a. n^de-jagua-^[k]uera b. [←]nẽ-mĩtã-^[ŋ]uera
2SG-dog-PL 2SG-child-PL
'you dogs' 'your children'

¹ A huge thank you to the native speakers of Paraguayan Guarani for sharing their language with me: Irma Ovelar, María Gómez, Laure Galeano, Elvira Martínez, Alfredo Almirón, Armando, and Analía García. Thank you to Claire Moore-Cantwell, Ben Eischens, Harold Torrence, Kie Zuraw, Sam Zukoff, Bruce Hayes, Jian-Leat Siah, Hunter Johnson, and members of the UCLA Phonology Seminar. All errors are my own.

- (2) a. o-karu-^[peve]
3-eat-until
'until he eats'
- b. [←]õ-kõsĩnã-^[mẽvẽ]
3-cook-until
'until he cooks'
- (3) a. o-ka^{'ru-ta]}
3-eat-FUT
'he will eat'
- b. [←]õ-kõsĩ^{nã-ta]}
3-cook-FUT
'he will cook'

* often dismissed as **idiosyncratic** and **unproductive**

* remains **understudied** compared to regressive nasalization

2 This talk

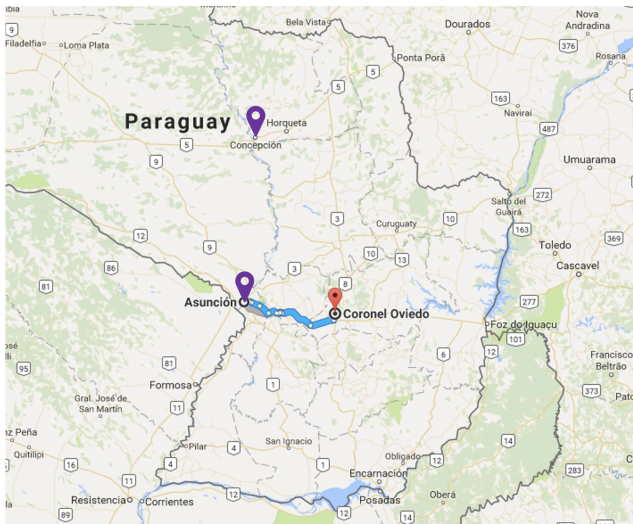

- First formal analysis of Guarani progressive nasalization as **phonologically conditioned suppletive allomorphy** (Carstairs 1988, Paster 2006)
 - morphemes have different lexical specifications (Tranel 1990, et seq.)
 - predicts differential behavior of suffixes in progressive nasalization
- Alternative analyses are possible but more complex (Russell 2021)
- Analysis can be extended to account for dialectal variation and other constructions (Appendix)

3 Background

- Paraguayan Guarani (Tupi-Guarani, Tupian) is spoken by 5-6 million in Paraguayan and neighboring areas of Argentina and Brazil.
- All data collected in consultation with 8 native speakers.

6: in-situ fieldwork in Coronel Oviedo, Paraguay

2: virtual fieldwork; Asunción and Concepción

- 12 phonemic vowels of 6 qualities (i, i, u, e, o, a), all contrasting in nasality.
- No voiced stops, instead has nasal-oral stops [m^b, n^d, ŋ^g]. All contrast with plain voiceless stops.
- Nasal-oral stops and full nasal consonants are in complementary distribution. Similarly, j [ç] and ñ [ɲ].

- (4) a. -m^ba b. -mã (5) a. a'jja b. ã'ñã
TOT CMPL 'during' 'evil'

- Regressive and “progressive” nasaliation are different mechanisms (Lapierre & Michael 2018, Russell 2021, Cabrera 2024).

	regressive	progressive
triggers	rightmost nasal vowels, nasal-oral stops	root nasal vowels
targets	voiced segments	initial voiceless stops, or full suffixes
locality	local	non-local
productivity	productive	lexically specific
prosodic struc.	sensitive	insensitive

* no “bidirectional” nasalization

- Extensive and exceptionless **regressive** (leftward) nasalization.
 - triggered by phonemic nasal vowels and nasal-oral stops
 - suffixes and roots form their own prosodic domain (Cabrera 2024)

- (6) a. n^da-jja-jjo-hai'hu-i b. ñã-ñã-ñã-ñã-hẽn^du-i
NEG-1 PL.IN-REC-love-NEG NEG-1 PL.IN-REC-listen-NEG
'we don't love e.o.' 'we don't listen to e.o.'

- (7) ã-ñẽ?ẽ-se-'m^ba-ta-mã
3-talk-DES-TOT-FUT-CMPL
'he will want to finish talking'

- (8) [[[[[prefix - root] - suff] - suff] - suff] - suff]

4 Progressive nasalization: the facts

[12]

- Only a handful of stop-initial morphemes undergo progressive harmony alternations.

- (9) a. jagua-[←][k]uera
dog-PL
'dogs'
- b. [←]mĩtã-[←][ŋ^g]uera
child-PL
'children'
- (10) a. a-jero'ki-[tã]
1SG-dance-FUT
'I will dance'
- b. [←]ãi-pĩtĩ-[←]ũõ-[tã]
1SG-help-FUT
'I will help'
- (11) a. a-jero'ki-[mã]
1SG-dance-CMPL
'I finished dancing'
- b. [←]ãi-pĩtĩ-[←]ũõ-[mã]
1SG-help-CMPL
'I finished helping'

- Suffix targets are affected differently by progressive nasalization.

- (12) a. o-karu-[←][pã]
3-eat-TOT
'he ate (completely)'
- b. [←]õ-ñẽ?ẽ-[←][m^ba]
3-talk-TOT
'he talked (completely)'
- (13) a. che-'si-[pẽ]
1SG-mother-DOM
'my mother'
- b. [←]chẽ-mĩ-[←]tã-[mẽ]
1SG-child-DOM
'my child'

- Progressive nasalization triggered only by phonemic nasal vowels.

- (14) [←]pãñãm^bi-[←][k]uera *-[←][ŋ^g]uera
butterfly-PL
'butterflies'

- Alternations may stack and occur non-locally.

- (15) a. o-karu-se-[←][pã]-[←][pota]-[←][peve]
3-eat-DES-TOT-INCIP-until
'until he is about wanting to finish eating'
- b. [←]õ-ñẽ?ẽ-se-[←][m^ba]-[←][m^bota]-[←][mẽvẽ]
3-talk-DES-TOT-INCIP-until
'until he is about wanting to finish talking'

* across intervening suffixes (-se DES)

* across oral vowels of alternating suffixes

- Verbal and nominal roots also show lexically-specific progressive alternations, as seen in compounds.

[13]

- (16) a. o-[←][k]i
3-rain
'it rains'
- (17) a. [←]ãmã-[←][ŋ^g]i
rain-rain
'rain'
- b. [←]hũ-[←][ŋ^g]i
black-rain
'grey; brown'
- c. [←]h-ãsẽ-[←][ŋ^g]i
3POSS-cry-rain
'weep'

- List of stop-initial suffixes

(Estigarribia 2020, Russell 2021)

undergoing (T ~ N ^D)	undergoing (full nas.)	non-undergoing
'kuera 'ŋ ^g uera PL	pe mē LOC;DOM	ta FUT
'pa 'm ^b a TOT	'peve 'mēvē 'until'	pa Q
po'ta m ^b o'ta INCIP		ke FORCE
'ti 'n ^d i COLL		mā CMPL
(and roots)		nā REQ
		nē DUB
		mō'ʔā NEG.FUT
		'mī PLEA;DIM

(T = voiceless stop; N^D = nasal-oral stop)

5 The analysis

1. Lexical specificity

→ Morphemes differ in their lexical specification in three ways (Tranel 1990, et seq.)

(T = voiceless stop; N^D = nasal-oral stop)

undergoing	'kuera ~ 'ŋ ^g uera PL	{TV, NV} NV → N ^D V
undergoing	pe ~ mē LOC; DOM	{TV, N ^D V}
non-undergoing	ta FUT	{TV}
	mā CMPL	{N ^D V}

* **post-oralization** N → N^DV / __ V (Stanton 2017)

2. Phonological conditioning

- (19) *[αNAS]]_{ROOT} ... [-αNAS, -CONT] (PROGHARM)

Assign a violation to every non-local sequence of a rightmost [αNAS] segment in a root followed by a [-αNAS] stop in the output.

Root control (non-local)

Symmetric (α)

- (20) $\overleftarrow{\text{õ-nē?ē-se-m}^b\text{a-m}^b\text{o'ta}}$
3-talk-DES-TOT-INCIP

- (21) *jagua-ŋ^guera, *mītā-ḵuera
dog-PL child-PL

- PROGHARM selects nasal-initial allomorphs in the presence of nasal roots.

- (22) mītā-ŋ^guera *- 'kuera
child-PL

	/Ṽ _{RT} - {TV, NV}/	*NV	IDENT[NAS]	PROGHARM	*CONTOUR
a.	Ṽ - TV			*!	
b.	V - TV		*!		
c.	Ṽ - NV	*!			
d.	Ṽ - N ^D V				*

[18]

- Similarly, oral-initial allomorphs are selected in the presence of an oral root.

(24) jagua-¹k²uera *-¹ɲ⁹uera
dog-PL

/V _{RT} - {TV, NV}/		*NV	IDENT[NAS]	PROGHARM	*CONTOUR
(25)	a. V - TV				
	b. V - NV	*!		*	
	c. V - N ^D V			*!	*
	d. \tilde{V} - N ^D V		*!		*

[19]

- Suffixes with full nasalization have a nasal vowel in their nasal allomorph.

(26) kosi'nã-¹mẽ *-pe
kitchen-LOC

/ \tilde{V} _{RT} - {TV, N \tilde{V} }/		*NV	IDENT[NAS]	PROGHARM	*CONTOUR
(27)	a. \tilde{V} - TV			*!	
	b. \tilde{V} - N \tilde{V}				
	c. \tilde{V} - N ^D \tilde{V}				*!

[20]

- Non-alternating morphemes violate PROGHARM optimally.

→ Nasal root, oral suffix

(28) ā¹-pĩtĩ¹võ-¹la *-n^da
1SG-dance-FUT

/ \tilde{V} _{RT} - {TV}/		*NV	IDENT[NAS]	PROGHARM	*CONTOUR
(29)	a. \tilde{V} - TV			*	
	b. \tilde{V} - N ^D V		*!		*
	c. V - TV		*!		

[21]

→ Oral root, nasal suffix

(30) a. o-jero'ki-mā[←]
3-dance-CMPL

/V _{RT} - {N \tilde{V} }/		*NV	IDENT[NAS]	PROGHARM	*CONTOUR
(31)	a. V - N \tilde{V}			*	
	b. V - T \tilde{V}		*!		
	c. \tilde{V} - N \tilde{V}		*!		*

* suffixes fail to spread nasality to preceding suffixes and roots.

[22]

- Accumulating violations of PROGHARM predict stacking of progressive alternations.

(32) a. $\overleftarrow{\text{mĩtã-}}\text{ṽ}^{\text{g}}\text{uera-}\text{mẽ}$
child-PL-DOM

$\tilde{V}_{\text{RT}} - \{ \text{TV}, \text{NV} \} - \{ \text{TV}, \text{N}\tilde{\text{V}} \} /$	*NV	IDENT[NAS]	PROGHARM	*CONTOUR
a. V - TV - TV			**!	
b. V - TV - N $\tilde{\text{V}}$			*!	
c. V - NV - N $\tilde{\text{V}}$	*!			
 d. V - N ^D V - N $\tilde{\text{V}}$				*

6 Closing

[23]

- I argued that Paraguayan Guarani progressive nasalization is a case of **phonologically conditioned suppletive allomorphy**.
 - no literal spread of nasality feature, nor bidirectional spread (Lapierre & Michael 2018, Russell 2021, Cabrera 2024)
 - differences in lexical specification predicts differences across suffixes (Tranel 1990, et seq.)

undergoing	'kuera ~ 'ṽ ^g uera PL	{TV, NV} NV → N ^D V
undergoing	pe ~ mẽ LOC; DOM	{TV, N $\tilde{\text{V}}$ }
non-undergoing	ta FUT	{TV}
	mã CMPL	{N $\tilde{\text{V}}$ }

(34)

[24]

Extensions and future work:

- Alternative analyses possible but unfavorable.
 - lexically-indexed constraints (Pater 2007, et seq.)
 - agreement by correspondence (Rose & Walker 2014)
- Extend analysis to **root** alternations?
 - compounds and exceptional causative constructions (Russell 2021, Estigarribia 2021)

(35) a. ka'ʔu b. ãkã-ṽ^ga'ʔu c. mō-ṽ^ga'ʔu
 'drunk' head-drunk CAUS-drunk
 'dizzy' 'to inebriate'

* mixed evidence for their **productivity** vs. **lexicalization**

- Dialectal variation** might point to a more complex allomorphy selection process.

Appendix

Dialectal variation

- All data previously discussed is from Coronel Oviedo speakers.
- Asunción and Concepción speakers show **optional** progressive nasalization.

Coronel Oviedo speakers:

- (36) a. $\overset{\leftarrow}{\text{õ-ñẽ?ẽ-se-}}\text{m}^{\text{b}}\text{a-}\text{m}^{\text{b}}\text{ota-}\text{m}^{\text{b}}\text{ẽvẽ}$
 3-talk-DES-TOT-INCIP-until
 ‘until he is about wanting to finish talking’

Asunción, Concepción speakers:

- (37) a. $\overset{\leftarrow}{\text{õ-ñẽ?ẽ-se-}}\text{p}^{\text{b}}\text{a-}\text{p}^{\text{b}}\text{ota-}\text{p}^{\text{b}}\text{ẽve}$
 3-eat-DES-TOT-INCIP-until
 ‘until he is about wanting to finish eating’

- Optionality is **asymmetric**: nasal(-initial) suffix allomorphs cannot occur with oral roots.

Asunción, Concepción speakers:

- (38) a. $\overset{\leftarrow}{\text{mĩtã-}}\text{'kuera}$ b. $\text{*jagua-}\text{'ŋ}^{\text{g}}\text{uera}$
 child-PL dog-PL
 ‘children’ ‘dogs’
- (39) a. $\overset{\leftarrow}{\text{chẽ-mĩtã-pe}}$ b. $\text{*che-}\text{'si-mẽ}$
 1SG-child-DOM 1SG-mother-DOM
 ‘my child’ ‘my mother’

- **Proposal:** speakers regularize progressive nasalization, preferring oral allomorphs in general (Bonet et al. 2007).

(40) PRIORITY

Given an input containing allomorphs, assign a violation mark to each morpheme that does not respect the lexical priority ordering of allomorphs. (Bonet et al. 1007)

- **Dialectal variation:** relative ranking of PRIORITY and PROGHARM
 - competing pressures of lexical preference for orality and phonological optimization

* *Asunción, Concepción speakers:* variable ranking of PRIORITY and PROGHARM

(41)

$/\tilde{V}_{RT} - \{TV \gg NV\}/$	*NV	IDENT[NAS]	PRIORITY	PROGHARM	*CONTOUR
a. $\tilde{V} - TV$				*	
b. $V - TV$		*!			
c. $\tilde{V} - N^DV$			*!		*

* *Coronel Oviedo speakers:* strict ranking of PROGHARM over PRIORITY

(42)

$/\tilde{V}_{RT} - \{TV \gg NV\}/$	*NV	IDENT[NAS]	PROGHARM	PRIORITY	*CONTOUR
a. $\tilde{V} - TV$			*!		
b. $V - TV$		*!			
c. $\tilde{V} - N^DV$				*	*

Roots in progressive nasalization

- **Recall:** roots undergo progressive nasalization.

(43) a. o- $\overleftarrow{[k]i}$
3-rain
'it rains'

(44) a. $\overleftarrow{am\tilde{a}}-\overleftarrow{[ŋ^g]i}$ b. $\overleftarrow{h\tilde{u}}-\overleftarrow{[ŋ^g]i}$ c. $\overleftarrow{h-\tilde{a}s\tilde{e}}-\overleftarrow{[ŋ^g]i}$
rain-rain black-rain 3POSS-cry-rain
'rain' 'grey; brown' 'weep'

- Roots also alternate in **exceptional causative constructions** (Estigarribia 2020, Russell 2021, Estigarribia 2021)

(44) a. o- $\overleftarrow{[p]ai}$ b. $\tilde{o}-\tilde{m\tilde{o}}-\overleftarrow{[m^b]ai}$ diego-pe
3-wake.up 3-CAUS-wake.up diego-DOM
'he woke up' 'he woke up Diego'

(45) a. che- $\overleftarrow{[k]ai'gue}$ b. n^de chē- $\tilde{m\tilde{o}}-\overleftarrow{[ŋ^g]ai'gue}$
1SG-bore 2SG 1SG-CAUS-bore
'I'm bored' 'you bored me'

- **Exceptional:** otherwise follow the expected repressive nasalization pattern.

(46) a. $\overleftarrow{\tilde{a}-m^bo-pu'pu}$?i b. n^de $\overleftarrow{\tilde{a}-m\tilde{o}-k\tilde{a}n\tilde{e}'?o}$
1SG-CAUS-hot water 2SG 1SG-CAUS-tired
'I boiled water' 'I tired you'

- At the surface, exceptional causatives have **two possible analyses**:

– **Analysis 1**: root is exceptionally nasal-initial

- (47) $\overleftarrow{\text{õ-mõ-}}\text{m}^{\text{b}}\text{ai}$ → root not phon. conditioned
3-CAUS-wake.up

– **Analysis 2**: causative prefix is exceptionally nasal

- (48) $\overleftarrow{\text{õ-mõ-}}\text{m}^{\text{b}}\text{ai}$ → root is phon. conditioned
3-CAUS-wake.up

* **Analysis 2** is in line with proposed analysis

* **mõ-** prefix is exceptionally nasal, selecting nasal-initial allomorphs

- Crucially, there's mixed evidence for **productivity vs. lexicalization** of exceptional causatives:

Productive

- consistent allomorphy across compounds and causatives
- speakers generalize to new constructions

Lexicalized

- exceptional cntrs. have idiomatic meanings
- exceptional causative variably used across cntrs/contexts

- * **Productive**: roots that show progressive nasalization in compounds also show progressive nasalization in causatives

- (49) a. $\text{ka}'\text{ʔu}$ 'drunk' b. $\tilde{\text{ãkã-}}\text{ŋ}^{\text{g}}\text{a}'\text{ʔu}$ head-drunk 'dizzy' c. $\text{mõ-}}\text{ŋ}^{\text{g}}\text{a}'\text{ʔu}$ CAUS-drunk 'to inebriate'
- (50) a. $\text{ti}'\text{ki}$ 'drop; to drip' b. $\tilde{\text{ãmã-}}\text{ŋ}^{\text{g}}\text{i}'\text{ki}$ rain-to.drip 'rainwater' c. $\text{mõ-}}\text{ŋ}^{\text{g}}\text{i}'\text{ki}$ CAUS-to.drip 'to squeeze/dis-till'

- * **Productive**: speakers generalize to new constructions and environments

- (51) a. $\text{o-}}\text{ki}$ 3-rain 'it rains' b. $\tilde{\text{hũ-}}\text{ŋ}^{\text{g}}\text{i}$ black-rain 'grey; brown' c. $\tilde{\text{h-ãsẽ-}}\text{ŋ}^{\text{g}}\text{i}$ 3POSS-cry-rain 'weep'

Context: *Imagine you don't want to go to work because you're sick. You pray to the gods that it rains so you don't have to work. It finally starts to rain - your prayers worked! How do you say "I made it rain"?*

- (51) $\text{che } \tilde{\text{ã-mõ-}}\text{ŋ}^{\text{g}}\text{i}$, * $\tilde{\text{ã-m}}^{\text{b}}\text{o-}}\text{ki}$
1SG 1SG-CAUS-rain
'I made it rain'

- * **Lexicalized**: exceptional causatives have idiomatic meanings, while non-exceptional causatives have compositional meanings

- (52) a. $\tilde{\text{õ-mõ-}}\text{ŋ}^{\text{g}}\text{ara}'\text{i}$ pe $\text{mĩ}'\text{tã-mẽ}$
3-CAUS-man DEM child-DOM
'he **baptized** the child' (Russell 2021)
- b. pe $\text{i-vi}'\text{gote}$ $\tilde{\text{õ-m}}^{\text{b}}\text{o-}}\text{kara}'\text{i}$ pe $\text{mĩ}'\text{tã-mẽ}$
DEM 3-mustache 3-CAUS-man DEM child-DOM
'The mustache **makes** the child look **like a man**' (Russell 2021)

- (53) a. $\text{che } \text{n-}\tilde{\text{ã-mõ-}}\text{m}^{\text{b}}\text{u-i}$ pe bomba
1SG NEG-1SG-CAUS-sound-NEG DEM balloon
'I didn't **pop/explode** the balloon'
- b. $\text{che } \text{n-}\tilde{\text{ã-m}}^{\text{b}}\text{o-}}\text{p}^{\text{b}}\text{u-i}$ pe $\text{i-m}^{\text{b}}\text{ara}'\text{ka}$
1SG NEG-1SG-CAUS-sound-NEG DEM 3-guitar
'I didn't **sound** the guitar'

- * **Lexicalized:** variable use of exceptional causative across constructions/contexts

- (54) a. n^de chẽ-**mõ**-ŋ^gai'gue b. n^de nã-chẽ-**m^bo**-kaigue-i
 2SG 1SG-CAUS-bored 2SG NEG-1SG-CAUS-bored-NEG
 'you bored me' 'you didn't bore me'
- (55) a. che ãõ-**mõ**-m^bi'ta b. che nõ-ãõ-**m^bo**-pi'ta-i
 1SG 1/2-CAUS-stop 1SG NEG-1/2-CAUS-stop-NEG
 'I stopped you' 'I didn't stop you'

- Crucially, should only extend proposed analysis to exceptional causatives if they show the same productivity (phonological conditioning) as suffixes.
